

# INSTRUCTIONS FOR FIRE SAFETY & EVACUATION PLAN

*This hotel was constructed in accordance with the stringent fire safety standards that offer an extensive protection against any fire accident. However, to prepare the guests for the unlikely event of fire, we would like you to carefully read the below instructions and stick to the fire safety guidelines.*

- **Switch off** all electrical appliances and lights when leaving the room (kettle, iron, TV, radio, and other devices).
- **Do not** cover lamps with flammable materials.
- **Remember, smoking is prohibited** in all common enclosed areas of the hotel and inside the rooms.
- **Before check-in**, get to know the location of all exits and familiarize with the evacuation plan, which is attached to "Information for Guests" service guide in your room.
- **Try to remember** where the fire extinguishers are located. Your life and personal belongings will be saved if you know how and when to use the fire extinguishers.
- **Upon detecting any fire or smoke**, notify the reception. ask by calling **100** or **112**. If the fire gets out of control, remain calm, close the door and windows without locking them, and leave the building by the exit stairs.
- **If** the corridors and staircases are filled with smoke and/or fire and you cannot leave the building, stay inside the room, close the door, sprinkle the door with water and stuff the cracks with wet material (towels, sheets, etc.), open the windows widely, shout out for help and wait for assistance.
- **Call the telephone operator** by phone **100** or **+370 614 21888** and explain your location. Beat at the door or signal to the people from the window to attract their attention by all possible means.
- **To avoid injuries of smoke inhalation**, sprinkle the door with water and stuff the cracks with wet towels or sheets. If you are caught in smoke, take short breaths and crawl to escape because the air nearer the floor is cleaner and less likely to contain deadly gases.
- **Wait the firemen to arrive**, come to the window and call for help.

**Most people die from smoke, toxic gases and panic attacks. Panic is usually the result of not knowing what to do in the fire accident. Remember the instructions and evacuation plan. This will greatly increase your survival chances.**
